Full-Stack Software Engineer · Solutions Integration · Bilingual EN/FR

Software Engineering student at ÉTS specializing in solutions integration and full-stack development. Hands-on field experience in IT support and process automation at Vidéotron (2,000+ tickets, 94% satisfaction, NPS 9.6/10). Designed REST APIs with robust validation (Angular / Spring Boot), automated testing, and CI/CD pipelines. Comfortable in client-facing environments and application architecture with technical rigour.

Professional experience

Solutions Integration Developer, *Fastercom* — *Montréal*

2025-12 – 2026-03

- Configured and integrated TMS solutions through database parameterization and dynamic adaptation of application components.
- Integrated Google Maps geocoding and managed REST API calls for transport routing.
- Delivered structured Test → Dev → Production deployments using GitLab and CI/CD pipelines.

Full-Stack Software Engineer (Contract), *The Mad Space*

2025-10 – 2026-03

- Architected and shipped a print-on-demand e-commerce marketplace (~15,000 LOC, 30+ REST API endpoints, 17+ bilingual pages) with 10+ Prisma/PostgreSQL relational models, multi-role authentication, internationalization (FR/EN), and multi-currency support (CAD, USD, EUR, GBP).
- Designed and automated 4 business workflows integrating 7+ third-party APIs (Stripe, Gelato, Google Merchant Center, GA4, Google Ads), with webhook processing in 300–500 ms and API latency of 150–300 ms.
- Implemented production-grade security: rate limiting, HMAC webhook signatures, HttpOnly cookies, centralized audit logs, OAuth 2.0 with refresh-token rotation for Google Merchant Center sync via Supabase Edge Functions (Deno).
- Deployed at scale on Vercel and Supabase (20–30 successful CI/CD deployments). GDPR / Quebec Law 25 / Law 96 compliant. Reduced order processing time by 10–15 minutes per order via automation of 5–7 operational steps.

IT Automation & Support Technician, *Vidéotron* — *Montréal*

2022-01 – 2025-10

- Resolved 2,000+ support tickets (AHT 11:18, 94% satisfaction, NPS 9.6/10): diagnosis, follow-up, and resolution.
- Automated ~50% of recurring tasks via Power Automate (HR / IT / Finance), increasing reliability and reducing turnaround time.
- Acted as Shift Lead (evening and morning): supervised the on-duty team, monitored online presence and call uptake, handled incidents, and supported technicians during interventions.
- Trained for the Shift Lead role with logistics responsibilities: produced mid-shift reports (day and night) to ensure operational continuity.
- Documented procedures and runbooks to stabilize deployments and accelerate onboarding of new technicians.

Selected projects

Cadence — Co-founder & Tech Lead, mobile coaching app • 2025 – present

- Architecting a mobile coaching application for the Quebec francophone market with co-founder Alexandre. Stack: Expo + TypeScript + NativeWind + Supabase. Web landing page deployed on Vercel.
- Structured 169+ GitHub issues across 13 sprints (Sprint 0 → 11) with strict acceptance criteria, comprehensive competitive audit (8+ apps), and security-by-design (RLS Supabase from Sprint 1, OWASP Mobile Top 10 audit planned).

Airport Display Management System — ÉTS academic project • Java, Swing, Observer • 2024

- Designed console + Swing UI with multi-level Observer pattern, achieving < 100 ms latency across 3 synchronized views, with full JUnit test suite.

FinanceJ — ÉTS academic project • Project Administrator • Java, Maven • 2024

- Maintained and modernized a modular MVC desktop application using Observer + AbstractTableModel to decouple UI, business logic, and data access. Refactored to Java 21.
- Industrialized the project on Maven and GitLab: integrated JUnit, Checkstyle, PMD, QALab, Javadoc generation, automated deployments, and SCM/issue management.

Education

B.Eng. Software Engineering — ÉTS, Montréal	2024-10 – present
DEC, Application Development Techniques — Collège Rosemont	2022-01 – 2024-01
DEP, IT Support — CFP des Riverains	2019-09 – 2022-02

Technical skills

Architecture & Design: Full-stack architecture, MVC, REST, modular monolith; Design patterns (Observer, Strategy, Template Method); UML modelling (GRASP), domain-driven design.

Backend & API: Java (Spring Boot), Node.js / Express, C#; Secure REST API design; Server-side validation (Zod, DTO), error handling; SQL query optimization (PostgreSQL, MySQL, SQLite).

Frontend & UX: React, Angular, TypeScript; Next.js (SSR / SSG); Java Swing / JavaFX desktop UI; Responsive design and accessibility.

Quality & Industrialization: Unit testing (JUnit, Jest), TDD; CI/CD (GitHub Actions, GitLab CI); Static analysis (Checkstyle, PMD); Maven, dependency management.

DevOps & Deployment: Vercel, Supabase, Supabase Edge Functions (Deno); Docker (basics); Environment configuration (.env); Monitoring and logging.

Security & Compliance: OAuth 2.0, HMAC webhook signatures, HttpOnly cookies, audit logs, rate limiting; GDPR, PIPEDA, Quebec Law 25 awareness.

Certifications

- Responsive Web Design (300 hours) — freeCodeCamp
- Intro to AI Strategy — Codecademy
- Learn Python 3 — Codecademy
